

Trailer Mounted, Mobile, 11kV Distribution Substation

Normal OH lines are vulnerable to natural disasters like flood, storms etc. The suspension poles, tension poles, pole with distribution transformers may get severely damaged due to disasters causing outages of power for a very long time. Normal maintenance takes longer period to rectify the damaged equipment/ structure to restore power supply.

This trailer mounted mobile sub-station can act as a substitute of any kind of poles i.e. Tension, suspension & DT pole and acts as “Emergency Restoration System” in distribution system.
